Address: 157 Duong Van Be Street, Hanoi, Vietnam

SKILLS

AI & Generative Tech: Prompt Engineering (Advanced), LLM Integration, LLM Observability, MCP (Model Context Protocol), AI Agent Design (LangGraph), LLM Fine-tuning (LoRA/QLoRA), Alignment (DPO/ORPO), AI-Assisted Dev

Backend & Architecture: Python, Git, System Design, RESTful API, Database Management, Reliability Engineering (Circuit Breaker, Caching, Chaos Testing), Cloud Deployment (Render)

UI/UX & Design: Figma, FigJam, Photoshop, Capture One, Canva

Game Development: Unity (C#), Unreal Engine 5

Languages: English (B2)

INTERESTS

Gaming & game exploration

Sports

Traveling

Career Objective

A Computer Science Engineer with a strong foundation in backend development and system design, plus over 3 years of UI/UX design experience. I am deeply passionate about building and applying AI/LLM systems in real-world products — from LLM integration and building AI Agents with LangGraph, to LLM fine-tuning (LoRA/QLoRA) and designing reliable AI Agent architectures (MCP Server, Reliability Engineering). My goal for the next 3 years is to grow into a specialized AI Engineer, building AI systems that are scalable, reliable, and deliver breakthrough user experiences.

Work Experience

UI/UX Design Intern 2026 - 2026
VinSmart Future — Internship as part of the AI20k training program (VinUni)

- Designed UX/UI for V-PetSafe — a residential pet management system with a resident-facing app and a management web portal (BQL), from user needs research and user-flow mapping to hi-fi prototypes in Figma.
- Designed the Resident Management module, handling complex edge cases: pet-list overflow display via a pill-tag + drawer pattern, and household compliance-score logic based on the worst-case principle.
- Designed a centralized admin dashboard covering 3 core workflows (pet registration, reports, violations) with a status system distinguishing detection source (Camera AI / manual report).
- Applied a systematic design process (needs & goals → user flow → wireframe → moodboard → hi-fi prototype) and integrated Figma MCP to speed up design-to-code handoff.

Graphic Designer 2022 - 2025
Royal Fashion

- Designed interfaces, product imagery, and marketing content that helped increase average annual sales by 20%.
- Built visual identity, UI, and layouts for websites, landing pages, and digital products.
- Applied AI and prompt engineering with creative tools to speed up content production and improve image quality.
- Collaborated with marketing and development teams to ensure visuals aligned with brand identity and user experience.

Education

Computer Science / Computer Games Engineering 2019 - 2022
Vistula University (Poland) — Engineer's Degree in Computer Science — GPA: 4.0/5.0

Certifications

AI20k Certificate — Applied Artificial Intelligence 2026
VinUni

Projects

AI Agent & LLM Engineering 2026
VinUni AI20k Program · github.com/QuanMinhNguyen199

- Built a stateful AI Agent using LangGraph, combined with LLM fine-tuning (LoRA/QLoRA) and alignment via DPO/ORPO.
- Implemented guardrails and a Human-in-the-Loop (HITL) mechanism to ensure the AI Agent operates safely and responsibly.
- Built an MCP Server (FastMCP + SQLite) with search, insert, and aggregate tools, with full pytest test coverage.
- Designed a reliable AI Agent architecture: circuit breaker, response caching (Redis), chaos testing, and observability.
- Deployed cloud infrastructure and production environment for the AI system.

Lead Backend Developer — OpenUp 2026
AI-Powered RPG EQ Simulator

- Built the backend for an Emotional Intelligence (EQ) simulator in an RPG format, where players use natural language to converse with AI-driven NPCs.
- Resolved repetitive AI dialogue via turn-stage injection, ensured consistent NPC pronouns (per-chapter fields), and fixed AI score inflation with server-side clamping.
